

Practical 1: Introduction to DBMS

Code:

Code:

Sample Schema used:

```
create table student
(
    roll_no    number(5) primary key,
    sname      varchar2(20),
    branch     varchar2(15),
    dob        date
);
-- Insert records into student
insert into student values (1, 'AMIT', 'CSE', '15-JUN-2005');
insert into student values (2, 'PRIYA', 'IT', '22-AUG-2005');
insert into student values (3, 'RAHUL', 'CSE', '02-JAN-2006');

-- Retrieve all records
select * from student;
```

-- Retrieve structure of the table

describe student;

-- Retrieve database/table metadata

select table_name from user_tables;

Output of: DESCRIBE student;

Name	Null?	Type
ROLL_NO	NOT NULL	NUMBER(5)
SNAME		VARCHAR2(20)
BRANCH		VARCHAR2(15)
DOB		DATE

Note: This introductory practical demonstrates the basic DBMS workflow - creating a table (schema definition), inserting data, and querying it back - illustrating how a DBMS stores and retrieves structured data, as discussed in the theory document.

Output:

Output of: SELECT * FROM student;

ROLL_NO	SNAME	BRANCH	DOB
1	AMIT	CSE	15-JUN-05
2	PRIYA	IT	22-AUG-05
3	RAHUL	CSE	02-JAN-06
