

Practical 13: Triggers in PL/SQL

Code:

Create a row-level trigger to show salary changes

```
CREATE OR REPLACE TRIGGER show_salary_changes12
  BEFORE DELETE OR INSERT OR UPDATE ON emp
  FOR EACH ROW
DECLARE
  sal_difference NUMBER;
BEGIN
  sal_difference := :NEW.sal - :OLD.sal;
  dbms_output.put_line('Old salary: ' || :OLD.sal);
  dbms_output.put_line('New salary: ' || :NEW.sal);
  dbms_output.put_line('Salary difference: ' || sal_difference);
END;
/
```

Create a trigger to log location history on update

```
CREATE OR REPLACE TRIGGER price_history_trigger11
  BEFORE UPDATE OF loc
  ON dept
  FOR EACH ROW
BEGIN
  INSERT INTO dept_history
  VALUES
  (:old.deptno, :old.dname, :old.loc);
END;
/
```

Trigger fired on update (sample output)

```
UPDATE emp SET sal = 1400 WHERE empno = 7369;
```

Output:

Trigger created.

Trigger created.

Old salary: 800

New salary: 1400

Salary difference: 600

1 row updated.
