

Practical 2: ER Diagram

Code:

This practical is conceptual (ER Modeling) and does not involve SQL code. A sample ER model for an Employee-Department database scenario is described below in textual form.

Entities and Attributes

EMPLOYEE (Emp_No [Primary Key], Fname, Lname, Age, Salary, Dept_No)

DEPARTMENT (Dept_No [Primary Key], Dname, Location)

Relationship

WORKS_IN: relates EMPLOYEE and DEPARTMENT with a Many-to-One cardinality - many employees work in one department. Each EMPLOYEE has total participation (must belong to a department); each DEPARTMENT has partial participation.

Textual ER Diagram

```
[EMPLOYEE] --(N)---WORKS_IN---(1)--- [DEPARTMENT]
|attrs: Emp_No(PK), Fname, Lname, Age, Salary    |attrs: Dept_No(PK), Dname, Location
```

Output:
