

Practical 4: Aggregate Functions in SQL

Code:

Create and populate the Store_Information table

```
CREATE TABLE Store_Information (  
    Store_Name VARCHAR2(20),  
    Sales NUMBER(10),  
    Txn_Date DATE  
);  
  
INSERT INTO Store_Information VALUES ('Los Angeles', 1500, '05-JAN-1999');  
INSERT INTO Store_Information VALUES ('San Diego', 250, '07-JAN-1999');  
INSERT INTO Store_Information VALUES ('Los Angeles', 300, '08-JAN-1999');  
INSERT INTO Store_Information VALUES ('Boston', 700, '08-JAN-1999');
```

Average of Sales

```
SELECT AVG(Sales) FROM Store_Information;
```

Count of store entries

```
SELECT COUNT(Store_Name) FROM Store_Information;
```

Maximum Sales

```
SELECT MAX(Sales) FROM Store_Information;
```

Output:

Table created.

1 row created.

1 row created.

1 row created.

1 row created.

AVG(SALES)

687.5

COUNT(STORE_NAME)

4

MAX(SALES)

1500
